A; Cross-references: GB:M16467; NID:g148376; PIDN:AAA24810.1; PID
C; Genetics:
A; Gene: sulA
C; Function:
A; Description: inducible cell division inhibitor
A; Note: expression of sulA is repressed by lexA protein
C; Superfamily: cell division inhibitor sulA
C; Superfamily: cell division inhibitor sulA
C; Superfamily: cell division inhibitor sulA
C; Superfamily: cell division control; SOS response

patent No. 5849894

i GENERAL INFORMATION:

APPLICANT: Clemente, Thomas E.

APPLICANT: Kishore, Ganesh M.

APPLICANT: Mitsky, Timothy A.

APPLICANT: Stark, David M.

TITLE OF INVENTION: Improved Rhodospirillum Rubrum

TITLE OF INVENTION: Poly-B-Hydroxyalkonoate Synthase ADDRESSEE: Arnold, White & Durkee
STREET: P.O. Box 4433
CITY: Houston
STATE: TX
COUNTRY: USA
ZIP: 77210-4433
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPAtible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/756,317
FILING DATE: 25-NOV-1996
CLASSIFICATION: 536 US-08-204-329-1 US-08-959-638-8 US-08-482-627-5 US-08-801-092-4 US-08-328-673A-8 US-09-315-113-4 PCT-US94-10357-2 PCT-US94-10357-2 PCT-US94-10357-3 US-09-312-812-6 US-09-511-477-6 US-09-511-507-6 US-09-511-507-6 US-09-511-507-4 US-09-313-288B-20 US-09-342-653-7 US-08-313-288B-20 US-08-342-653-7 US-08-944-916-2 ALIGNMENT PRIOR APPLICATION DATA:

APPLICATION NUMBER: US 60/007,693

DESCRIPTION OF THOUSANDS OF HYDROXYBUTYRYL-COA TO CREATE PHB WHICH CONSISTS OF THOUSANDS OF HYDROXYBUTYRATE MOLECULES LINKED END TO END. PHB SERVES AS AN INTRACELLULAR ENERGY RESERVE MATERIAL WHECH CONSISTS OF THOUSANDS OF HYDROXYBUTYRATE MOLECULES LINKED END TO END. PHB SERVES AS AN INTRACELLULAR ENERGY RESERVE MATERIAL WHEN CELLS GROW UNDER CONDITIONS OF NUTRENT LIMITATION.

-!- PATHWAY: POLY-beta-hydroxybutyrate biosynthesis; third step.
-!- SUBGNIT: MONOMER (PROBABLE).
-!- SUBGNIT: MONOMER (PROBABLE).
-!- SUBCILULAR LOCATION: CYLOPIASMIC.
-!- BIOTECHNOLOGY: Forms a biodegradable plastic that is degraded naturally and completely by bacteria into carbon dioxide and water. Utilized in the medical industry. Plates made from PHA-based plastics can be left in place to help heal fractured bones. After the bone has healed, the plastic slowly breaks down in the body. Utilized by Imperial Chemical Industries (ICI) to produce a PHB-PHV (poly-B-valerate) copolymer sold under the trade name 'Biopol'. Biopol is used as packaging material. The PHB-PHV copolymer consists of approximately 20% PHV and 80% PHB. It can be synthesized by incorporating glucose and valeric acid into the medium. PHB-PHV is stronger and more flexible than regular PHB. Under industrial conditions, 80% or higher of the cell dry weight of A.eutrophus usually consists of the PHB-PHV copolymer.
-!- SIMILARITY: BELONGS TO THE PHA/PHB SYNTHASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       h a collaboration EMBL outstation .

CATALYTIC ACTIVITY: Cleavage of the beta-1,4-glycosidibetween N-acetylmuramic acid and N-acetylglucosamine rathereby conserving the energy in a newly synthesized 1,6-anhydrobond in the muramic acid residue.

SUBCELLULAR LOCATION: Periplasmic (Potential).

SIMILARITY: BELONGS TO THE SLT FAMILY OF TRANSGLYCOSYI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. SUBCELLULAR LOCATION: Inner membrane.

MISCELLANEOUS: THE N-TERMINUS OF SULA PROTEIN MIGHT BE INVOLVED RECOGNIZING THE CELL DIVISION APPARATUS.

SIMILARITY: THE C-TERMINUS SHOWS SIMILARITY TO THE N PROTEIN OF PHAGE LAMBDA.

CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN FROM POSITION 14

"Evolution of the enterobacterial sula gene: a component of the SOS system encoding an inhibitor of cell division.";
Gene 52:31-40(1987).

-!- FUNCTION: SULA IS A COMPONENT OF THE SOS SYSTEM AND AN INHIBITOR OF CELL DIVISION. ACCUMULATION OF SULA CAUSES RAPID CESSATION OF CELL DIVISION AND THE APPEARANCE OF LONG, NON-SEPTATE FILAMENTS.

THE EXPRESSION OF SULA IS REPRESSED BY LEXA PROTEIN. FTSZ SEEMS
TO BE THE TARGET OF SULA.

Complete genome sequence of a multiple drug resistant Salmonella

enterica serovar Typhi CT18.";

Nature 413:848-852(2001).

-!- FUNCTION: SULA IS A COMPONENT OF THE SOS SYSTEM AND AN INHIBITOR

OF CELL DIVISION AND THE APPEARANCE OF LONG, NON-SEPTATE FILAMENTS.

THE EXPRESSION OF SULA.

C -!- SUBCELLULAR LOCATION: Inner membrane.

-!- MISCELLANEOUS: THE N-TERMINUS OF SULA PROTEIN MIGHT BE INVOLVED IN

RECOGNIZING THE CELL DIVISION APPARATUS.

-!- SIMILANITY: THE C-TERMINUS SHOWS SIMILARITY TO THE N PROTEIN OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Z
